Total Experience: 4+ years

PROFESSIONAL SUMMARY

Automation Test Engineer with 4+ years in web and API testing, now writing and maintaining **Playwright** test suites in **JavaScript** for a retail product used by 1 lakh users. Built and stabilised 180+ automated tests with **@playwright/test**, taking the nightly regression run from 4 hours down to 1 hour 10 minutes using built in workers and CI sharding. Comfortable across the full cycle, from writing test cases in **Jira** and **Mastercraft** to running suites in **GitHub Actions** and raising defects with clear **Playwright** trace and screenshot evidence.

TECHNICAL SKILLS

Playwright · JavaScript · Test Automation · API Testing · Page Object Model · GitHub Actions · Manual Testing · Agile

Automation Frameworks Playwright (**@playwright/test**), Page Object Model, JavaScript fixtures and reusable helpers

Languages JavaScript (ES2022), Node.js, TypeScript basics, SQL basics, HTML and CSS selectors, XPath, JSON

Playwright and Libraries **@playwright/test**, Playwright **APIRequestContext**, expect assertions, fixtures and **test.extend**

CI/CD and Version Control GitHub Actions (workflows and matrix jobs), Git, GitHub, and npm

Testing Types Functional testing, Regression testing, Smoke and sanity, Cross browser testing (Chromium, Firefox)

Tools and Platforms Jira, MasterCraft, Postman, Chrome DevTools, VS Code

Methodologies Agile, Scrum, Test Automation strategy, BDD

WORK EXPERIENCE

Automation Test Engineer **Tata consultancy services, Bangalore**

May,2024 to Present

Project: TCS BANCS CT PAYMENTS (Agile)

- Automated 180+ regression tests in **Playwright** with **@playwright/test**, covering login, product search, cart and checkout journeys, which cut manual regression effort from 3 days to 6 hours per release.
- Structured the suite around the **Page Object Model** with one page class per screen and 25+ reusable methods, which reduced script maintenance time per UI change from around 2 hours to 20 minutes.
- Enabled built in workers and CI sharding for the nightly job with 4 workers, bringing total suite runtime down from 4 hours to 1 hour 10 minutes.
- Added smoke, regression and sanity tags with grep and project config so the team could slice runs on demand, giving developers a 9-minute build verification run on every deployment.
- Cut flaky failures by around 40% by replacing manual waits with **Playwright** web first assertions and auto waiting locators, and by capturing traces on first retry for fast root cause analysis.

Project: Part TCS Life science ADD – Analytics & Insights

Mar 2022- Mar 2024

- Wrote and executed 400+ functional and regression test cases in **Mastercraft** across 9 sprints, maintaining an average of 92% test case execution before each release sign off.
- Logged 210+ defects with clear steps, logs and screenshots, and drove them to closure with a defect rejection rate under 6%.
- Performed API validation in **Postman and Swagger** for 40+ endpoints, verifying request payloads, response codes and error handling before the UI screens were ready.

EDUCATION

B.E. Electronics Instrumentation, [University BDT College of Engineering],2021

7.6 CGPA

AWARDS AND ACCOLADES

- Spot Award for closing the release regression ahead of schedule, 2026
- Best Team Player, Analytics & Insights,2024
